

YEN SHEN ELECTRIC IND.CO.,LTD

The 18" BLDC fan features the world's only design integrating both the motor and driver, delivering a seamless and efficient operation. With aluminum blades precisely matched to the motor's speed, the fan achieves maximum airflow while maintaining quiet performance. This makes it ideal for any environment where powerful cooling and noise reduction are essential. The energy efficiency is outstanding, consuming less than USD 0.03 even after running for 24 hours straight, allowing you to enjoy uninterrupted comfort without concern for high energy bills.

Crafted with care, the retro-style fan guard is both durable and aesthetically pleasing. The intelligent BLDC motor is not only energy-saving but also equipped with comprehensive electronic protection for enhanced safety. The natural breeze mode simulates a gentle, refreshing airflow for added comfort. In addition to the stand model, the fan can also be wall-mounted and comes with an RF remote control, ensuring ease of use even in large spaces. Since 1976, we have focused on every detail to design high-quality, durable, and safe products.....
